

Amendments to the Specification:

Please amend "SUMMARY OF THE INVENTION" beginning at page 2, line 17 as follows:

An object of the invention is to provide a hatch for an electronic device. The hatch comprises a main body, a thermal insulation layer, a conductive layer and an electrical insulation layer. The thermal insulation layer is disposed on the inner surface of the main body. The conductive layer fully covers the surface of the thermal insulation layer. The electrical insulation layer partially covers the conductive layer leaving part exposed, allowing heat to be dissipated insulated by the thermal insulation layer such that the temperature on the surface of the main body is stable.

Please amend "BRIEF DESCRIPTION OF THE DRAWINGS" beginning at page 3, line 12 as follows:

FIG. 4 is a large view cross-sectional diagram of A in FIG. 3 in accordance with the present invention.
